

HUMAS System — Investment Pitch Document

Version 1.1 — September 2025

Current Stage

Prototype launched, onboarding of first users in progress (Q3 2025)

What is it?

HUMAS System is a platform that transforms human effort into verified digital value. We use glyphs, blockchain, and a unique energy unit (HUNIT) to create a new layer of interaction between people, technology, and the economy.

How it works

The platform already includes:

- HU-Translator — a glyph generator: a personal signature based on energy of action
- HU-Chain — a blockchain layer where transactions are validated by human contribution
- HUMAScoin (HUMSX) — the system's active unit
- HUNIT — the core energy metric (1 hu = 1 kWh)

Revenue Model

1. User subscriptions — access to personal dashboards and validation algorithms
2. B2B solutions — API modules for HR, EdTech, CivicTech
3. Physical media — NFC cards and wristbands with digital signatures
4. Glyph access — participation in private networks and proof of contribution
5. HUMAScoin — transactional unit across B2B/B2C scenarios

Market Opportunity

- Modern platforms face a lack of verifiable identity and transparent digital trust
- People are looking for alternatives to algorithmic systems where human input remains invisible
- Digital communities demand reputation based on real actions, not likes or impressions

HUMAS System offers an architecture that already works and is ready to scale.

Tokenomics

- Total Supply: 8,000,000,000 HUMAScoin (HUMSX)
- Backed by: 1 HUNIT = 1 kWh of human energy
- Conversion Rate: 1 hu = 2.618 HUMAScoin (golden ratio)
- Burn mechanism: tokens are burned upon use (anti-hype / scarcity model)

Allocation:

- 0.5% — Listing & Liquidity
- 25% — Development
- 15% — Strategic Partners
- 20% — Private & Public Rounds
- 30% — Community / HUNIT verification
- 9% — Reserve & Stability Fund
- 0.5% — NFT Pools & Rewards

Development Roadmap

2025 — Launch: HU-Translator, wristbands, user registration
 2026 — Blockchain core, AI validation, digital Energy ID
 2027 — Institutional integrations, global network growth

Financial Goals & Exit Strategy

- 1 million verified users within 3 years
- Target valuation: €100–250 million
- Funding round: €500–800k (SAFE / Convertible Note)
- Exit path: network value growth + strategic ecosystem role

Who We're Looking For

Investors with experience in:

- Web3 / Blockchain
- Digital Identity
- Ethical Infrastructure
- Validation / Energy Models

Investor Benefits

- Early access to platform, modules, and closed features
- Discounted tokens during launch + fixed conversion rate
- Priority in allocation of limited business packages
- Right to co-develop key modules (by agreement)
- Option to become a validator or ecosystem operator
- Participation in token growth and system share
- Access to the first pool of NFT identifiers and premium glyphs
- Direct contact with founders and strategic input
- Involvement in the growth of a decades-scale system with massive expansion potential
